

Release Note for VigorAP 905

| | |
|-------------------|--|
| Firmware Version: | 5.0.6 |
| Release Type: | Regular – Upgrade recommended when convenient, as it includes general improvements and optimizations |
| Applied Models: | VigorAP 905 |

VigorAP 905 is 11ax dual-band wireless mesh access point with a 5-port LAN switch, which port A1 supports 802.3af/at PoE-In. It provides the flexibility and advanced features for professional users to take full management of the wireless network, including the mesh technology, which aims for providing an easy way to expand the wireless network in minutes.

New Features

- None.

Improvement

- Improved: Support the selection of more than one SSID schedule profile.
- Improved: Remove the 4T4R Antenna option in Configuration>>Wireless LAN>>Radio Settings.
- Corrected: An issue that the access points became unresponsive after firmware update.
- Corrected: An issue with failure to show the gateway information via the Wireless APP.
- Corrected: An issue occurred while attempting to ping the IP address of the VigorAP device.
- Corrected: An issue that Management VLAN would be set back to default when using config sync in AP management.

Known Issue

- None.

Notes

- None.
